EXPERIENCE

Bank of the Philippine Islands

February 2026 - May 2026

Process Modelling and Technology Adoption Intern

- Developed **3** React microsites for Open Banking integrations, including independently designing and developing **2** in Figma and React
- Collaborated with another intern to prototype **8** potential mobile/web features in Figma and presented them to various business teams

TECHNICAL PROJECTS

BPI Automated Certificate Generation System

May 2026

Typescript, Node.js, Express, React, Vite, Tailwind, shadcn/ui, PostgreSQL

Built a full-stack internal tool automating certificate generation across **14** document templates using Playwright-based PDF rendering, a Node.js/Express backend, and a React/TypeScript frontend

- Implemented JWT authentication with role-based access for requester and approver roles, restricting certificate actions based on user permissions

BPI Complaint Management System

February 2026

Javascript, Node.js, Express, React, Tailwind, shadcn/ui, PostgreSQL

Built a full-stack admin dashboard with **12+** REST API endpoints, role-based access control, bcrypt password hashing, httpOnly cookie sessions, and parameterized queries across admin and user workflows

- Optimized React application performance to achieve a **100/100** Lighthouse score with **0.4s** First Contentful Paint and **0ms** Total Blocking Time in a React frontend with self-hosted fonts, context-based authentication, protected role-aware routing, and reusable Tailwind UI components
- Attained **100/100** Lighthouse SEO and accessibility scores with a **0.6s** Largest Contentful Paint through semantic HTML5 markup, ARIA labeling, and structured heading hierarchy

P.R.I.S.M: Patient Record Integration Scheduling and Management

April 2024

Javascript, Node.js, React, Vite, Tailwind, PostgreSQL

Built the front end for a patient-records system for a beauty clinic using React and Tailwind, connecting to a partner-built backend through Axios and RESTful APIs across **14** pages.

- Created a Figma design system (design tokens, typography, spacing, component states) first, then built it as reusable React components so the UI stayed consistent across all pages.
- Implemented role-based views for scheduling, records and reporting, and PDF export with jsPDF for filtered reports, coordinating with the backend team through an Agile workflow tracked in Excel.

CERTIFICATIONS

Google UX Design Professional Certificate (v2)

November 2025

freeCodeCamp Front End Development Libraries

May 2024

freeCodeCamp JavaScript Algorithms and Data Structures

July 2024

freeCodeCamp Responsive Web Design

January 2023

EDUCATION

University of Santo Tomas

June 2026

Bachelor of Science in Computer Science, Specialization in Data Science

- Coursework: Data Structures and Algorithms, Software Engineering, Data Warehousing, Machine Learning

SKILLS

Languages & Technologies: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, PostgreSQL, Node.js, Express, Next.js, Tailwind CSS, Axios, Vite, shadcn/ui, Context API, Python

Tools & Platforms: Git, GitHub, GitHub Copilot, Claude, ChatGPT, Visual Studio Code, Figma, Docker, Vercel

Practices: REST APIs, Responsive Web Design, Accessibility (WCAG), Database Design, Reusable Component Architecture, Web Application Security, Object-Oriented Programming, Agile Methodologies
